

Skill-Based Recruitment Platform

Industry:
Recruitment & Job Platform

Services Provided:
Dynamic Website Development
Admin Panel Development
Skill-Based Job Matching System

PROJECT OVERVIEW

ECOHOUSE is a digital recruitment platform that connects recruiters and job seekers through a structured skill-based job matching system. The platform allows companies to post job opportunities while candidates create professional profiles highlighting their primary skills and experience.

Proficyma Global developed a dynamic web platform with an integrated admin panel that enables efficient management of job listings, candidate profiles, & user interactions within the recruitment ecosystem.

KEY FEATURES

01. Skill-Based Job Matching

- Recruiters post jobs based on required primary skills
- Job seekers create profiles with their key skills & experience
- The system displays job opportunities to candidates whose skills match recruiter requirements

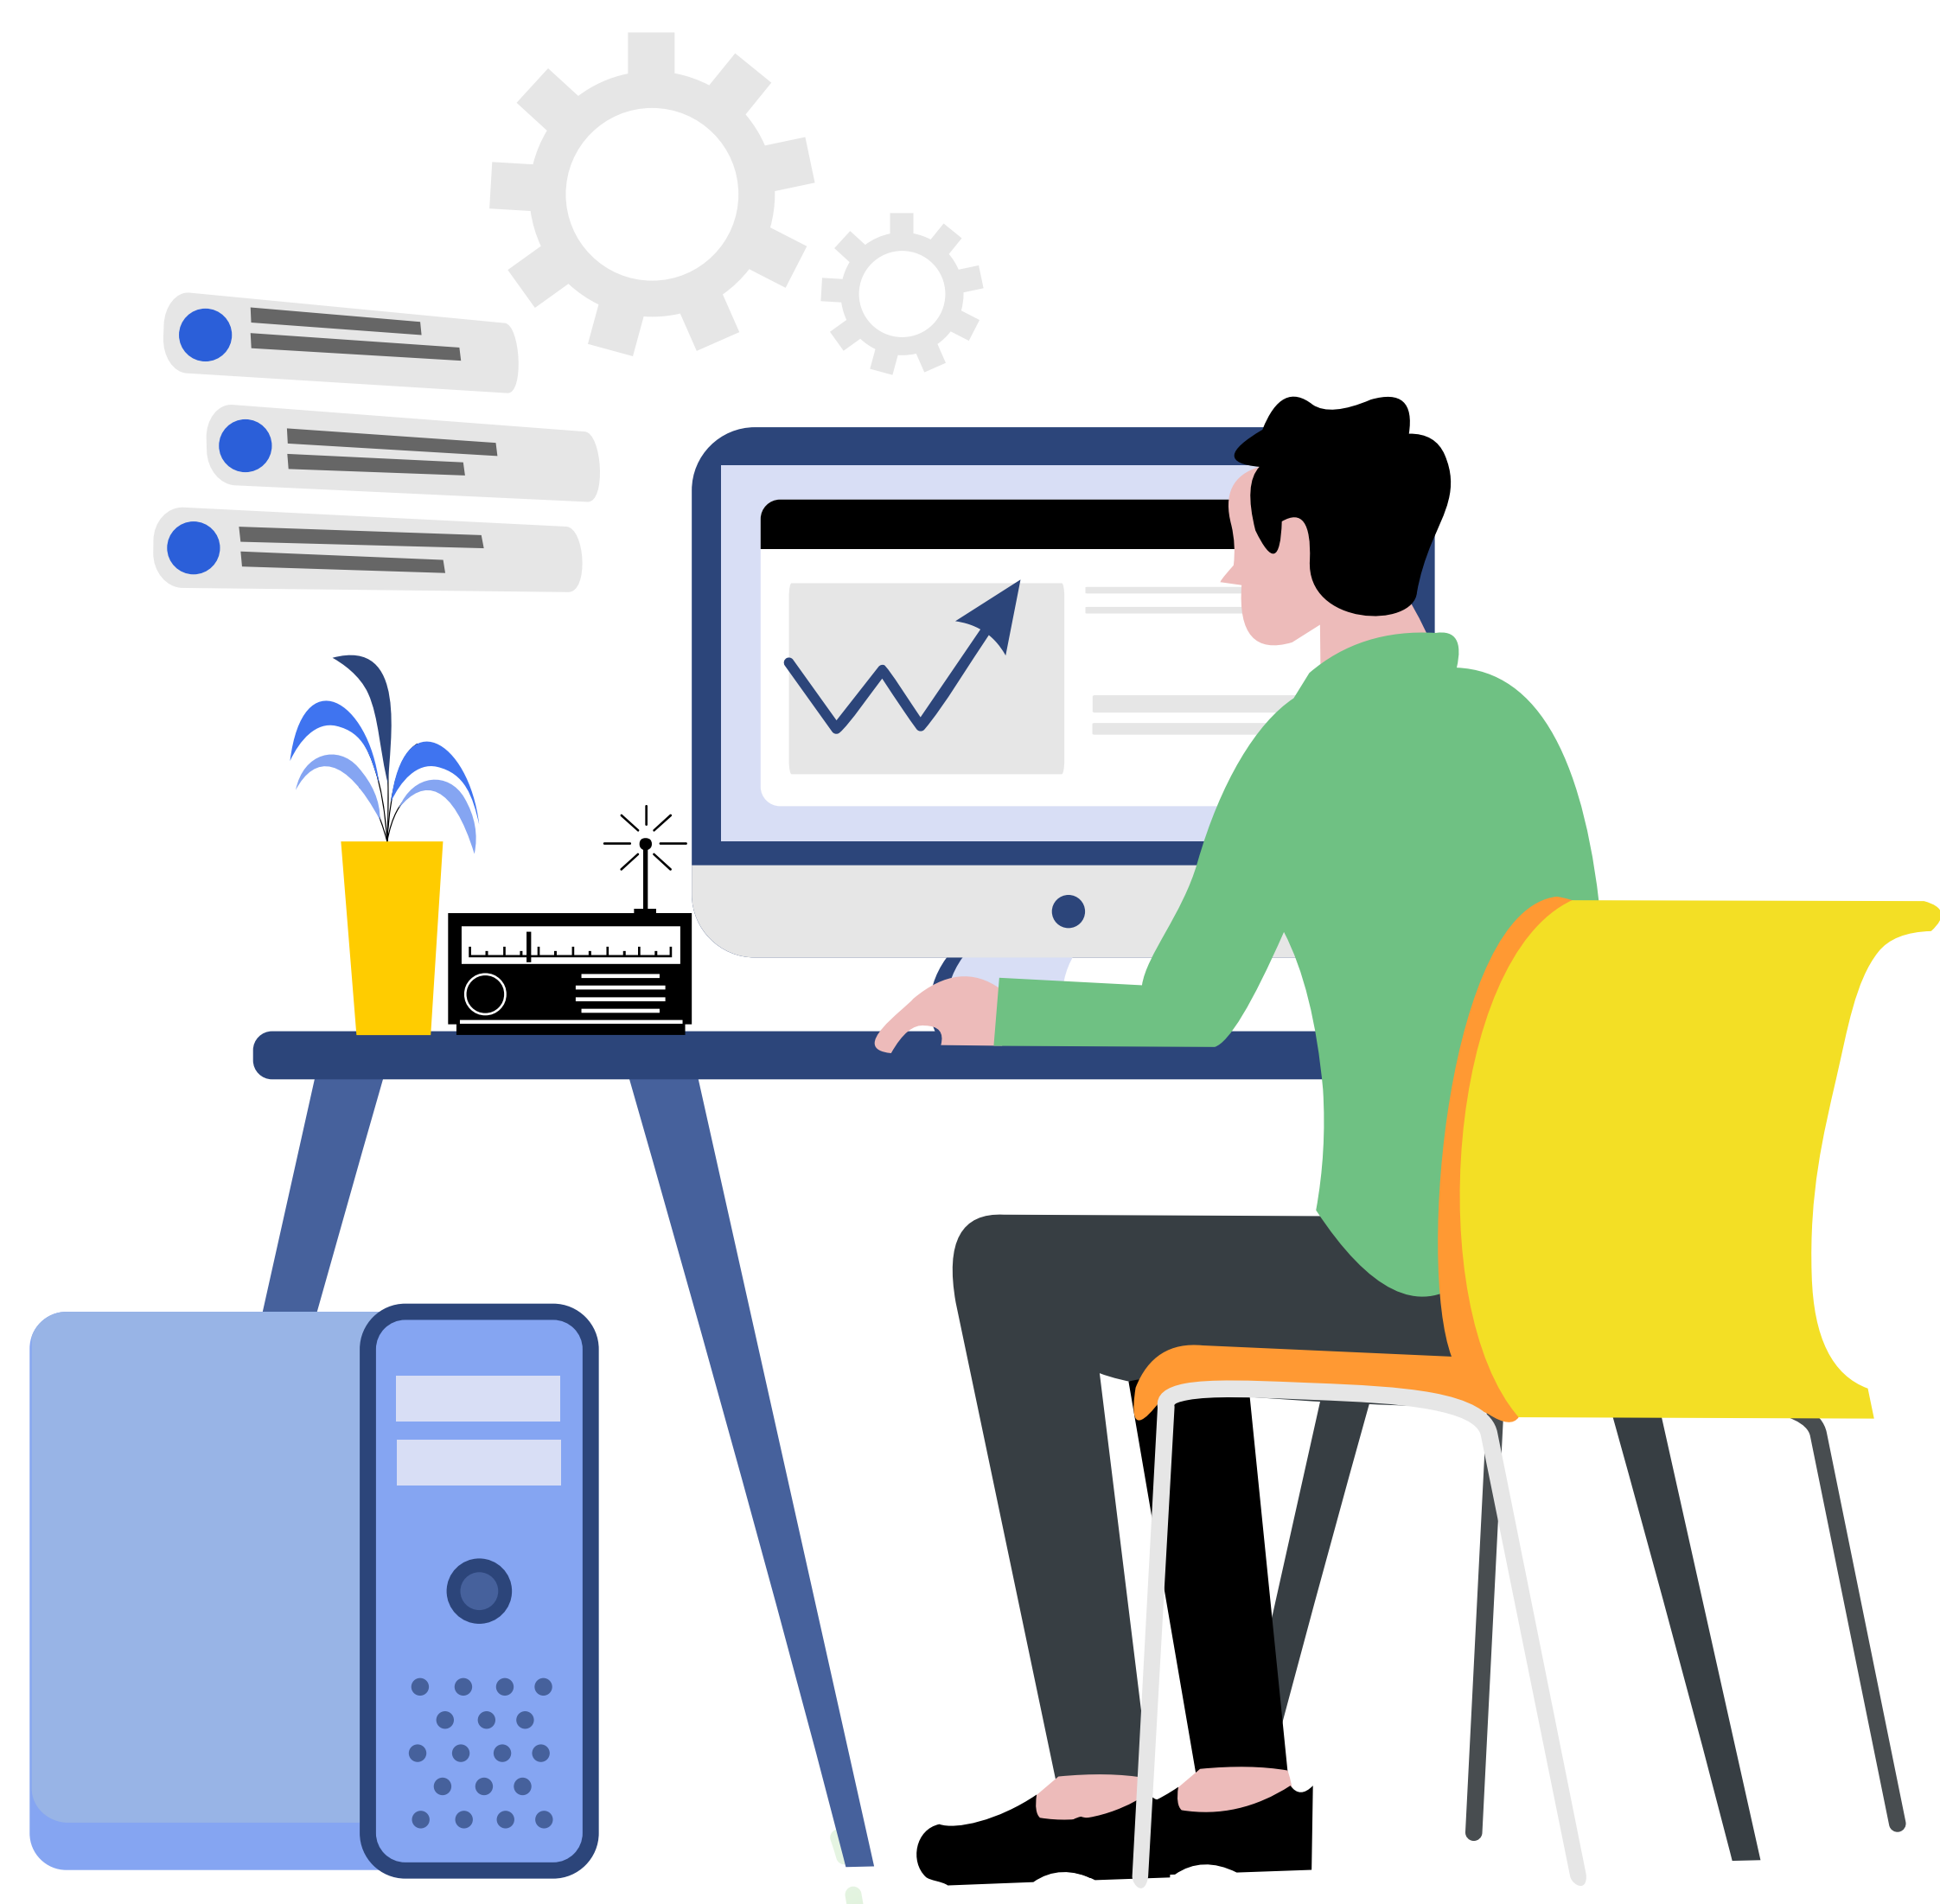

02. Recruiter Tools

- Post and manage job listings
- Review candidate profiles and skills
- Connect with potential candidates through the platform

03. Job Seeker Features

- Create professional profiles
- Add primary skills and experience
- Discover relevant job opportunities based on skill matching

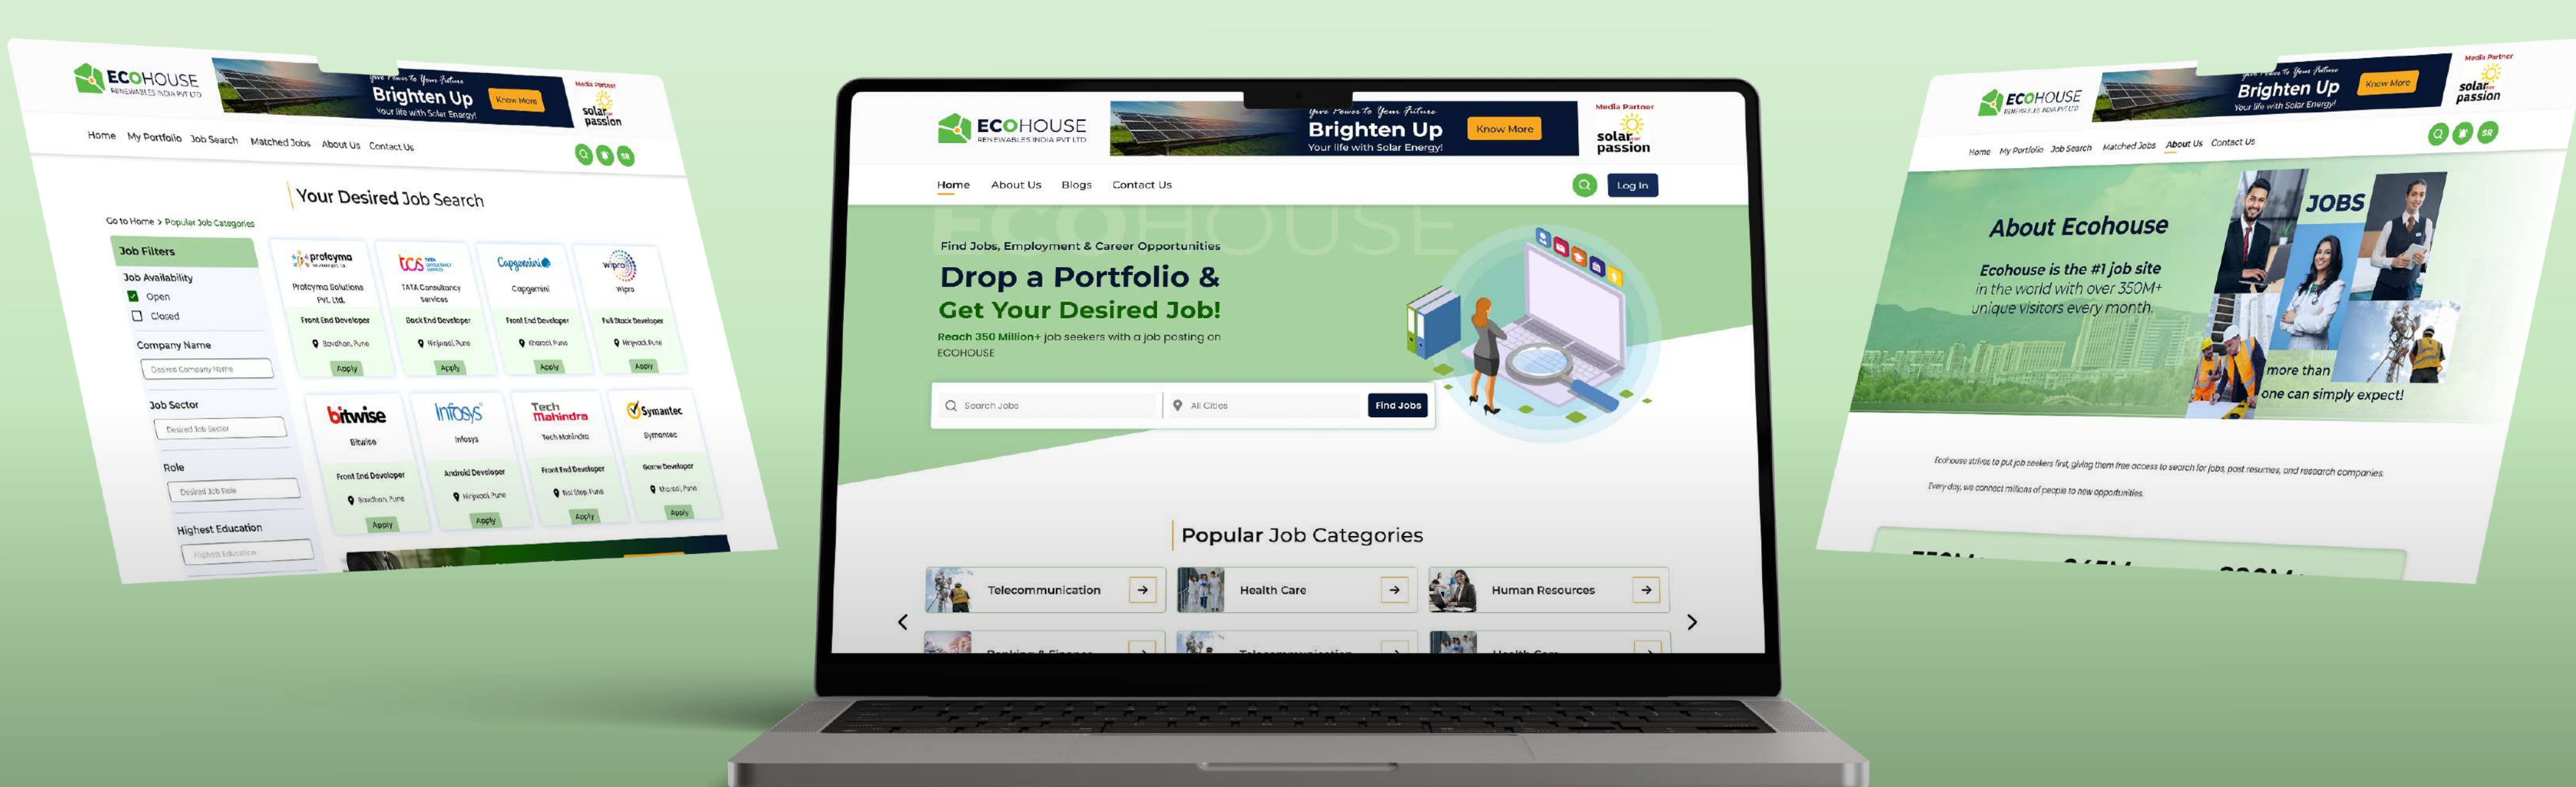

04. Admin Panel

- Manage recruiters and job seeker accounts
- Monitor job postings and platform activity
- Control platform content and user approvals

RESULTS & IMPACT

The ECOHOUSE platform provides a streamlined recruitment ecosystem where employers can discover qualified candidates and job seekers can access relevant opportunities based on their core skills. The skill-based matching approach simplifies the hiring process while improving job visibility and recruitment efficiency.

Why This Project Strengthens Proficyma Global's Portfolio

This project demonstrates Proficyma Global's capability to develop business-focused digital solutions that combine customer-facing websites with internal operational systems. It highlights our expertise in building scalable CRM platforms with role-based access and structured team workflows.
